

SAP material management has an extremely comprehensive set of features that may be configured to support any company’s specific requirements. However, the complex user interface often results in users resorting to manual interventions before updating the system. This adds the risk of manual transcription errors and means that SAP does not always reflect the real-time situation. Inaccurate inventory can have extremely costly consequences both in terms of time and money.

Our **Warehouse Operations** application, supporting all IM/WM functions, has been designed to make it easier and quicker to perform inventory and warehouse functions. The user’s menu system is tailored to only contain the options that their role requires. All actions can be performed from a mobile device using the camera to scan barcodes and security has been enhanced with extra user authentication features.

## KEY BENEFITS

<b>Enhance your experience</b>	All warehouse activities are easier and quicker to perform using a mobile device with an enhanced user experience and a menu system that is restricted to the options relevant to the operator’s role
<b>Guarantee your data integrity</b>	The intuitive design ensures that the operators update the system in parallel with manual activities eliminating the risk of errors from transcribing information later. Enhanced authentication features improve security
<b>Reduce costs</b>	Accurate inventory information gives you better control over your stock levels reducing the risk of over/under stocking  The time spent on operator training and error correction is reduced and there is no longer the need to purchase and support proprietary hardware
<b>More informed decisions</b>	Rapid access to inventory information supported by enhanced selection criteria ensures that you make the right management decisions at the right time

“ I have so much more confidence in my inventory reports ”

## A STREAMLINED USER EXPERIENCE

Our application is quick to implement to existing and new SAP implementations or as part of an upgrade project. It has been designed to make your job as a user easier and warehouse operations quicker and simpler to manage resulting in a more productive contribution to your business.

New users adapt to the web interface much quicker than with the traditional user interface reducing the training overhead and the risk of operator errors ensuring that SAP is always up to date. We support all inventory (IM) and warehouse (WM) functionality from goods receipt through to material movement/issue together with the enquiries, reports, forms and labels required. We have also enhanced the functionality provided by standard SAP in many places to enable you to perform your actions more promptly and securely.

## KEY FEATURES

<b>How is warehouse operation more efficient?</b>	Much improved user experience with intuitive design
	Web-based interface supporting all IM/WM functionality
	Fully customisable menu system per user role
	Enhanced search criteria for information retrieval
	Uses the devices camera to scan barcodes and supports EAN and QR codes
<b>Is the functionality complete?</b>	Editable purchase order text on goods receipt
	Confirmation of the goods receipt and the generated material document (following PO execution)
	Issue goods with reference to warehouse reservations, production or maintenance orders
	Confirm issue confirmation by digital signature or photographic evidence and save as an attachment to the material document
	Perform all other warehouse operations including stock overview, enquiries, transfers/postings, issues, cancellations and document/label printing
	Manage WM warehouse locations and confirm transfer orders

## TECHNICAL

<b>Does it operate in my environment?</b>	Supports SAP ECC 6.0 (all EHPs) to S/4HANA
	No additional SAP components or upgrades required
	Can be implemented in SAP Fiori, SAP BTP – Business Technology Platform (formerly known as SCP – SAP Cloud Platform) or in an alternative web hosted environment (i.e. no Fiori or BTP required)
<b>Is it simple to implement?</b>	Fast deployment in SaaS or web platform
	Inherits all permissions and authorisations with SAP authentication

## ABOUT ASAPTEK

Asaptek supply 'off-the-shelf' SAP applications that improve personal productivity and provide senior management with a more flexible way to extract the information they need to make business-critical decisions.
