

When releasing purchase documents from standard SAP you have no visibility of the background information supporting the request. To access this information, you must perform multiple transactions and the results are generally not sufficiently intuitive or informative with limited supporting analytics. It is therefore difficult to be sure that all factors have been properly considered when documents are released.

Our **Smart Releases** application has been designed to overcome these inadequacies. All your approval requests are available from a single query, you have access to features not available from standard SAP and the analysis features have been designed specifically to help you make a decision. The result is you approve documents easily and quickly and can be sure that your decision making is right for your business.

KEY BENEFITS

Enhance your experience	Actions are executed much quicker, from a single query, with an enhanced user experience, intuitive design and support for mobile devices
Eliminate inefficiencies	Your productivity is improved with quicker data access and data entry. All pending documents (order requests, purchase orders, contracts, service sheets) may be viewed by release code from one screen with rapid access to all the background information you need
Reduce costs	By analysing the budget status, historical prices, the purchase cycle, and supplier history you can be sure of retaining control over your costs and stock levels
More informed decisions	All the information you require to make the right decision is available to you in a clear and concise fashion

“ At last we have instant access to all the information we need to make the right decision ”

MAKE BETTER PURCHASING DECISIONS

Our **Smart Releases** application incorporates many features that are not available from standard SAP. You have access to a much wider range of analysis options designed specifically to assist you in deciding whether to provide approval for a request. You are also alerted to any possible irregularities and can reverse historical releases/rejections in case of error.

Our intuitive design means that it is much easier and quicker for you to review and approve purchase requests from any device including a tablet or smartphone. The fact that all your requests are available from one screen means that you have a complete picture of the current situation and can make informed decisions in a timely fashion.

KEY FEATURES

How is the approval process quicker?	View all documents pending your approval
	View the previous and subsequent approvers
	View all changes to the document prior to approval
	Approve/Reject single or multiple documents
	Reverse historical releases/rejections in case of error
	Receive emails highlighting pending approvals
Why are document requests more cost efficient?	View supplier history (purchases, open items and returns)
	Compare the costs with the budget
	Analyse the planned stock, coverage, and deviations in relation to your inventory policy
	View alerts for over/under stocking, price deviations, multiple purchases, overdue vendor items, unreferenced orders and other possible fraud risks
	Toggle between different currencies

TECHNICAL

Does it operate in my environment?	Supports SAP ECC 6.0 (all EHPs) to S/4HANA
	No additional SAP components or upgrades required
	Can be implemented in SAP Fiori, SAP BTP – Business Technology Platform (formerly known as SCP – SAP Cloud Platform) or in an alternative web hosted environment (i.e., no Fiori or BTP required)
Is it simple to implement?	Fast deployment in SaaS or web platform
	Inherits user permissions
