

As a SAP user you are under constant pressure to extract maximum benefit from the electronic storage and retrieval of business critical information. Your time is valuable and any unnecessary limitations on the tools you use can have a significant negative impact on your personal productivity and to your business. SAP exhibits many of these limitations.

We supply a portfolio of quality SAP applications that deal with these issues thereby improving personal productivity and the user experience. These applications deliver a whole range of benefits and are being used by more than 90 companies across fourteen countries and three continents.

Our team have a huge amount of experience delivering solutions to these and similar software user productivity issues while working for organisations such as IBM and PwC. We have been working with SAP for more than 20 years.

KEY BENEFITS

Enjoy ease of use	Operators easily interpret the displayed information whether on a smartphone, tablet or PC and require a minimum level of training
Improve your data integrity	Our Master Data applications improve the quality of your data with features that prevent duplicates, apply default values and highlight required fields together with change requests for the creation of new records
Gain easier access to management information	The reports provide pertinent information quickly with greatly enhanced features. You no longer need to perform multiple transactions to access the information you require
Apply enhanced functionality over standard SAP	Our applications incorporate many enhancements over standard SAP. The objective of these is always to give you the features and background information you need to best perform an action
Improve your productivity	Our applications centralise information so that tasks may be performed much quicker and easier
Gain access from anywhere	Our web-based applications may be used on any mobile device. They can be installed on premises, on the SAP Cloud Platform or hosted on the Cloud
Achieve a rapid Return on Investment (ROI)	You gain a rapid ROI through the ability to perform actions quicker with less errors to support and access to the management information you need when you need it

CONTINUOUSLY ADDING VALUE

Our applications development is User Driven. It will start as a specific user requirement which is then developed and evaluated before being released as part of our generic solution. We encourage our users to regularly request enhancements to existing applications always with the focus on business needs.

As part of our service, we help you deploy the application, assist with user training, provide custom modifications and can also develop new custom applications for you if required. All our applications are web-based with a focus on cloud solutions.

DELIVERING ANSWERS

What are your applications?	Our Master Data Suite supports a range of SAP modules. These applications make it much easier and quicker to add and edit data whilst ensuring integrity. This reduces the time you need to maintain your data and ensures that your reports and analysis are based on accurate information
	The Planning Monitor application manages all material planning scenarios in an easy and intuitive way from a single screen. It enables you to optimise your stock levels whilst anticipating the risks of stock failure, batch expiration and over coverage giving you the ability to plan much more effectively and make the right decisions for your business
	The Warehouse Operations application supports all IM/WM functionality from a mobile device (including barcode scanning). The operator only sees the options that are relevant to their role making it much easier to use and increasing the likelihood that they perform transactions in real-time
	Our Smart Releases application provides users with instant access to all the background information they need to decide whether and when to approve a purchase document ensuring that control is retained over stock levels resulting in better control over costs
Are new applications being developed?	Our ramp-up program is driven by user needs. We maintain a pipeline of new applications which includes applications for Purchasing Lifecycle Management, a Vendor Portal, and Quotation Management
Do they operate in my environment?	All our applications support SAP ECC 6.0 (all EHPs) to S/4HANA with fast deployment (typically 3-4 weeks project time). No additional SAP components or upgrades are required and user permissions are inherited from SAP
What project services do you provide?	Our services include: requirements definition, developing custom modifications, developing custom applications, providing deployment assistance and assisting with training, configuration and go-live support
What is your upgrade policy?	Our SaaS and software maintenance plans give you access to lifetime support and software enhancements

OUR MISSION

Our mission is to deliver the enhanced capability available from our products to the entire European base of SAP users thus enabling them to achieve maximum benefit from their systems.
