

Planning within SAP, although comprehensive, can be cumbersome and time consuming especially when you often have to perform multiple transactions and interact with Excel during the process.

Our **Planning Monitor** has been designed to radically improve the user experience and ensure that all information is available from a single-entry point. We have also added filtering, drilldown and analysis options to make it quicker and easier to optimise your plans.

Key capabilities such as the ability to forecast when material shelf life expires, analyse in financial terms and refine reorder points enables you to manage your stock levels more accurately.

## KEY BENEFITS

<b>Enhance your experience</b>	Improve productivity and reduce the risk of errors by managing all material planning scenarios (sales, production, purchasing and spare parts) in an easy and intuitive way from a single screen without having to use Excel
<b>Improve your performance</b>	<p>Make single or bulk updates to your material master data</p> <p>Execute MRP online, for one or more items, to automatically calculate purchase, transfer or production proposals and convert to a purchase requisition in one step</p>
<b>Reduce costs</b>	Optimise your stock-on-hand (both quantitatively and financially) by anticipating expiries and refining your reorder points whilst visualising material usage graphically
<b>More informed decisions</b>	Make key decisions backed up by all the information you need in one-place supported by more flexible rules, filtering and analysis

“We no longer rely on Excel for our production planning”

## PLAN WITH CONFIDENCE

Inaccurate planning can be extremely costly in terms of time, finance and lost opportunities and can even cause your factory to temporarily halt production.

The quality of a plan is only as good as the information provided. It is therefore essential that it is easy to define the parameters, interpret the results, identify risks, refine the plan and generate purchase requisitions.

Our SiMPL Planning Monitor application provides capabilities that are not available from standard SAP ECC and S/4HANA.

From S&OP, MPS to MRP for all scenarios (Sales, Make to Order, Make to Stock), SiMPL enables you to optimise your stock levels easily and intuitively whilst anticipating the risks of stock failure, batch expiration and over coverage.

## KEY FEATURES

<b>How do you plan successfully?</b>	Analyse coverage by days, weeks or months
	Apply selection criteria to one or more materials
	Display in terms of quantity and/or financial units
	Use colour coded risk alerts to signify material coverage status
	Import master data from Excel
<b>What can you plan?</b>	Perform plan v actual graphical analysis
	Plan based on forecast, consumption or reorder
	Exclude material that is about to expire from MRP
	Easily identify stockouts or over coverage
	Historically analyse material delivery lead time
	Automatically calculate purchase, transfer or manufacturing proposals for one or more items

## TECHNICAL

<b>Does it operate in my environment?</b>	Supports SAP ECC 6.0 (all EHPs) to S/4HANA
	No additional SAP components or upgrades required
	Can be implemented in SAP Fiori, SAP BTP – Business Technology Platform (formerly known as SCP – SAP Cloud Platform) or in an alternative web hosted environment (i.e. no Fiori or BTP required)
<b>Is it simple to implement?</b>	Immediate implementation (SAP Add-on)
	Inherits user permissions
	On Premises or SaaS

## ABOUT ASAPTEK

Asaptek supply 'off-the-shelf' SAP applications that improve personal productivity and provide senior management with a more flexible way to extract the information they need to make business-critical decisions.
